PROJECTS

📁 **MEGASTAR APT LAPTOP INVENTORY SYSTEM**   09/2022 - 10/2022

Team of 4 members (5 weeks)

- **Project builds on:**
   + MySQL - database
   + Spring Boot - API
   + NodeJs - dashboard page
   + React - client page
   + Jquery
   + Bootstrap
- **Position**: leader
   + Build, assign and monitor each member's tasks.
   + Quickly find a solution when members have problems and difficulties.
   + Organize check-in meetings (1 week / 1 time) or problem-solving meetings.
   + Build function to CRUD for the product, employee, blog, customer, and purchase order.
   + Cut the templates for the dashboard page
   + Install the swagger framework.
   + Build login, logout, and register functionality for both the dashboard and client page.
   + Authenticate and authorize the logged-in account.
- **Summary:** This is a laptop store management system with the following:
   + A dashboard page for admin users, who can use all system functions, and staff user, restricted users who only use some functions. The dashboard page provides 14 subpages with more than 40 functions for the owner to easily manage products as well as inventory statistics and business status.
   + A client page for customers user. Customers can see and order what products are being sold. Besides, to help customers choose the desired product, the client page has the function of filtering by price, brand, and other specifications.
